## Appendix I

### Delineation of Ground Water Zones

Public Water System Name: City of Santa Monica Arcadia Well Field  
 Source Name: Arcadia Well #4  
 Arcadia Well #5  
 Indicate the method used to delineate the zones:

Water System Identification Number:  
 Source Number: #4: 2535 J/C  
 #5: 2535M

\_\_\_\_\_ Calculated Fixed Radius (Default) (Show calculations below)

\_\_\_\_\_ Modified Calculated Fixed Radius (Show calculations below and attach documentation for direction of ground water flow)

X More detailed methods, type used (i.e. analytical methods, hydrogeologic mapping, modeling): The method used for generating the groundwater zones was a numerical groundwater flow model (USGS Mod flow code, 3 D analysis).

\_\_\_\_\_ Arbitrary Fixed Radius (For use only by or with permission of DHS—use minimum distances shown below)

### Calculated Fixed Radius Equation

The equation for the calculated fixed radius ( $R_t$ ) is  $R_t = \sqrt{Q t / \pi \eta H}$

$R_t = R_2, R_5, \text{ or } R_{10}$  corresponding to  $t$  (Calculate  $R$  for each of three times of travel, TOT)

$Q$  = maximum pumping capacity of well ( $\text{ft}^3/\text{year} = \text{gpm} * 70,267$ ): \_\_\_\_\_

$t$  = time of travel (years), 2, 5 and 10 years

$\pi = 3.1416$

$\eta$  = effective porosity (decimal percent) (If unknown, assume 0.2): \_\_\_\_\_

$H$  = screened interval of well (feet) (If unknown, assume 10% of  $Q$  gpm, 10 ft minimum): \_\_\_\_\_

**Specific methods follow on next page**

**Calculated Fixed Radius Delineation Method (Default)**

Using the equation presented above, calculate the size of zones for the appropriate aquifer setting of the source.

**Porous Media Aquifer**

Zone A (2 year TOT)  $R_2 =$  \_\_\_\_\_ ft, minimum = 600 ft—use larger: \_\_\_\_\_ ft

Zone B5 (5 year TOT)  $R_5 =$  \_\_\_\_\_ ft, minimum = 1,000 ft—use larger: \_\_\_\_\_ ft

Zone B10 (10 year TOT)  $R_{10} =$  \_\_\_\_\_ ft, minimum = 1,500 ft—use larger: \_\_\_\_\_ ft

**Fractured Rock Aquifer**

(Increase size of zones by 50%)

Zone A (2 year TOT)  $1.5R_2 =$  \_\_\_\_\_ ft, minimum = 900 ft—use larger: \_\_\_\_\_ ft

Zone B5 (5 year TOT)  $1.5R_5 =$  \_\_\_\_\_ ft, minimum = 1,500 ft—use larger: \_\_\_\_\_ ft

Zone B10 (10 year TOT)  $1.5R_{10} =$  \_\_\_\_\_ ft, minimum = 2,250 ft—use larger: \_\_\_\_\_ ft

**Modified Calculated Fixed Radius Delineation Method**

In porous media aquifers, if the direction of ground water flow is known (see Section 6.2.3), the default zone circle may be shifted upgradient by  $0.5R_4$ . The upgradient and downgradient limits of the zone are determined below.

**Zone A (2-year TOT)**

upgradient distance =  $1.5R_2 =$  \_\_\_\_\_ ft, minimum = 900 ft—use larger: \_\_\_\_\_ ft

downgradient distance =  $0.5R_2 =$  \_\_\_\_\_ ft, minimum = 300 ft—use larger: \_\_\_\_\_ ft

**Zone B5 (5-year TOT)**

upgradient distance =  $1.5R_5 =$  \_\_\_\_\_ ft, minimum = 1,500 ft—use larger: \_\_\_\_\_ ft

downgradient distance =  $0.5R_5 =$  \_\_\_\_\_ ft, minimum = 500 ft—use larger: \_\_\_\_\_ ft

**Zone B10 (10-year TOT)**

upgradient distance =  $1.5R_{10} =$  \_\_\_\_\_ ft, minimum = 2,250 ft—use larger: \_\_\_\_\_ ft

downgradient distance =  $0.5R_{10} =$  \_\_\_\_\_ ft, minimum = 750 ft—use larger: \_\_\_\_\_ ft

### Source and Site Characteristics Checklist - Ground Water Source

#### Physical Barrier Effectiveness Determination

Public water system City of Santa Monica Identification number \_\_\_\_\_  
Arcadia Well #4 #4: 2535 J/C  
 Name of source Arcadia Well #5 Identification number #5: 2535 M

Assessment date: 9/10/98 Assessment conducted by Komex•H2O•Science•Inc., attn:James Farrow

Complete DHS Well Data Sheet (attached) and include with Assessment Report

#### Directions:

1. Read through the form and collect the information needed to complete the form. (Hydrogeology, Soils, Presence of abandoned or improperly destroyed wells, Well construction and operation.)
2. Determine Parameter A, Type of Aquifer.
  - If the aquifer is confined, use the right-hand column, and evaluate only the parameters indicated for confined aquifers.
  - If the aquifer is unconfined, or semi-confined, or the degree of confinement is unknown, use the left-hand column and evaluate only the parameters for unconfined aquifers.
3. For each parameter appropriate for the source, place a check in the box for the answer that most closely applies to that source. If more than one answer is possible, select the more conservative (i.e. lower points) answer. *[For example, if the depth to static water (Parameter D) has varied between 45 and 55 feet, choose answer 2 (20 to 50 feet).]*
4. Add the points in the column appropriate for the source and interpret the score as shown on the bottom of the last page.
  - Determine whether the source has a High, Moderate or Low Physical Barrier Effectiveness. Use this in the Vulnerability analysis. The higher the points, usually the more effective the source and site are to retarding the movement of contaminants to the water supply.

NOTE: If the source is located in fractured rock the source is considered to have a Low Physical Barrier Effectiveness, regardless of the point total. So, if Parameter B, Aquifer Material, is 3 (Low), the remainder of the form does not need to be completed.

4	b or c	a
5	a	c or d
7	a	b or c
8	a	b or c
9	b	a or c
10	a	b or c

**Chemical Contamination**

If the PCA is categorized as **2b or 2c**, the risk ranking would be LOW if the PCA meets all of the parameters in the table below for **Low**. The risk ranking would be HIGH if the PCA meets all of the parameters in the table for **High**. Otherwise the risk ranking is MODERATE.

## Vulnerability Analysis Procedures – Ground Water Source

**The Vulnerability analysis incorporates the Possible Contaminating Activities (PCAs) identified in the inventory, their respective Risk Rankings, the Zone and the Physical Barrier Effectiveness determination. These factors are used to determine the PCAs to which the drinking water source is most vulnerable.**

City of Santa Monica  
Public water system Arcadia Well Field Identification number \_\_\_\_\_

Name of source Arcadia Well Field Identification number \_\_\_\_\_

Assessment date: Sep. 1998 Assessment conducted by James Farrow

## Vulnerability analysis steps:

1. For each PCA identified as existing in the protection area, or unknown, determine number of points for that PCA. (If the risk ranking for a PCA has been modified, Appendix E should be attached). *(For example, Very High (VH) risk activities are 7 points.)*
2. For each PCA determine which zone in which it occurs. Add the points associated with that zone. If the PCA exists within more than one zone, repeat the process for each zone. *(For example, if the PCA exists in Zone A add 5 points. For a VH risk PCA in Zone A, the PCA + Zone points = 7 + 5 = 12 points.)*
3. For each Drinking Water Source determine the Physical Barrier Effectiveness (PBE) (from Appendix C). Add the points associated with that PBE. *(For example, if the PBE is Low add 5 points. For a VH risk PCA in Zone A, the Vulnerability Points = PCA points + Zone points + PBE points = 7 + 5 + 5 = 17 points.)*
4. Prioritize all PCAs by the Vulnerability Points, from the most points to the least. A sample form is shown below.
5. Drinking Water Source is vulnerable to all PCAs with Vulnerability Points 8 or greater. Refer to the Vulnerability Matrix below.
6. In addition, the Drinking Water Source is vulnerable to all PCAs associated with a contaminant detected in the water source, regardless of Vulnerability Points.

*California Drinking Water Source Assessment and Protection Program*

**Vulnerability Matrix for GROUND WATER SOURCES**

The cutoff point for vulnerability is 8. The drinking water source is considered Vulnerable to all PCAs with Vulnerability Score greater than or equal to 8 (shaded boxes).

\* Source is considered vulnerable to PCAs that are Unknown, if the Vulnerability points are 8 or higher. Therefore, a source is vulnerable to all Very High risk PCAs if it is unknown whether the PCAs exist.

## Historical and Other Database(s)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Former Manufactured Gas (Coal Gas) Sites:** The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

## Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. ## DELISTED NPL: NPL Deletions

Source: EPA

Telephone: 703-603-8769

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

## NFRAP: No Further Remedial Action Planned

Source: EPA/NTIS

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

**Area Radon Information:** The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

**Oil/Gas Pipelines/Electrical Transmission Lines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

**USGS Water Wells:** In November 1971 the United States Geological Survey (USGS) implemented a national water resource information tracking system. This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on more than 900,000 wells, springs, and other sources of groundwater.

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1996 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in March 1997 from the U.S. Fish and Wildlife Service.

**Epicenters:** World earthquake epicenters, Richter 5 or greater

**Water Dams:** National Inventory of Dams  
Source: Federal Emergency Management Agency  
Telephone: 202-646-2801  
National computer database of more than 74,000 dams maintained by the Federal Emergency Management Agency.

**California Earthquake Fault Lines:** The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

**California Drinking Water Quality Database**  
Source: Department of Health Services  
Telephone: 916-324-2319  
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.
